

Steps to resolve the SQL Server 2000 Error

- Start SQL Server Enterprise Manager
- Select SQL Server Group, right click to get shortcut menu
- From the menu select New SQL Server Registration (you should get a wizard)
- In the wizard
- Next
- Select from the available servers the name of the machine that you are on. It will probably already be selected. Add it to the list of added servers. (It will be the only one.)
- Next
- Select connect using SQL Server Login
- Next
- Login Name sa
- Password (leave blank)
- Next
- Select add to an existing SQL Server group
- Next
- Finish
- Close

The wizard closes and you should be ready to work. Because this information is stored in your local user profile, you will need to perform these steps on every computer you use for class.
